NaijaJobber Business Plan

AI-powered remote employment platform connecting African talent with global employers — marketplace, compliance-ready workflows, and measurable hiring impact.

Version: 1.0 | **Date:** July 2026

This document contains proprietary information intended for investors, grant partners, and strategic advisors only.

1. Executive Summary

NaijaJobber is a two-sided employment marketplace built for the African remote-work economy. The platform serves job seekers with profile depth, AI-assisted CV tools, applications, interviews, learning, and wallet/referrals; and serves employers with company verification, job publishing, applicant pipeline, team management, billing, and analytics.

TARGET MARKET

Africa → Global

REVENUE MODEL

SaaS + fees

STAGE

MVP live

Our mission is to reduce friction between verified African talent and trustworthy global employers while creating auditable impact metrics suitable for grant reporting (placements, remote jobs, verified employers, countries reached).

2. Problem Statement

- Fragmented hiring:** Job seekers juggle informal channels; employers lack structured pipelines and verification.
- Trust gap:** Cross-border hiring requires employer verification, document review, and moderation — rarely available in generalist boards.
- Preparation gap:** Candidates lack accessible CV, interview, and learning tools aligned to remote roles.
- Impact opacity:** Funders and partners need KPIs (hires, remote roles, demographics) that legacy tools do not surface.

3. Solution & Product

NaijaJobber delivers end-to-end workflows in a single platform:

Stakeholder	Core capabilities (live / phased)
Job seekers	Profile & CV suite, job search/apply, kanban applications, interviews, learning, referrals, wallet
Employers	Company profile & verification, job CRUD, applicants/pipeline, interviews, AI match (mock), team, billing
Platform ops	Admin & ops dashboards: moderation, support, finance, marketing CMS, fraud signals, audit

Technology: NestJS + MongoDB API, Next.js 15 frontend, JWT auth, mock AI/payments for demo-safe deployment, Redis/BullMQ-ready infrastructure, role-based access for admin and ops staff.

4. Market Opportunity

Africa’s youth workforce is expanding while remote-first hiring accelerates globally. Nigeria and broader Anglophone Africa represent a large pool of tech, creative, and professional talent seeking USD/EUR-denominated remote roles. Employers seek cost-efficient, English-proficient talent with verifiable profiles and structured application data.

Initial beachhead

- Nigeria-based job seekers and diaspora-friendly remote roles
- SME and growth-stage employers hiring 1–50 remote roles/year
- Grant-aligned workforce development programs needing placement metrics

5. Business Model

Stream	Description	Timing
Employer subscriptions	Tiered plans (Basic / Pro / Enterprise) for job posts, featured listings, team seats	Year 1
Pay-per-post / sponsorship	Featured jobs, sponsored visibility, urgent badges	Year 1
Premium seeker tools	AI CV review, priority applications (optional add-on)	Year 2
Partnerships & grants	Workforce programs, NGO placement reporting, white-label pilots	Year 1–2

6. Go-to-Market Strategy

1. **Supply (seekers):** University partnerships, referral program, learning content, social proof from placements.
2. **Demand (employers):** Outbound to remote-friendly companies; verification-led trust; case studies on time-to-hire.
3. **Ops excellence:** Moderation queue, support SLAs, finance ops for subscriptions/refunds.
4. **Grant narrative:** Publish impact dashboard (seekers, remote jobs, hires, countries, women/youth provisional metrics).

7. Competitive Advantage

- Purpose-built for African remote employment (not a generic global board)
- Integrated verification, moderation, and admin/ops tooling
- AI-assisted candidate tools with mock-safe demo mode for partners
- Grant-ready impact and exportable reports (CSV/JSON)
- Phased, production-grade architecture (NestJS modules, RBAC, audit logs)

8. Traction & Milestones (planned)

Milestone	Target	Timeline
MVP dashboards (seeker, employer, admin, ops)	Complete	Q3 2026
500 verified seeker profiles	Community seed	Q4 2026
50 verified employers	Pipeline	Q4 2026
100 published remote jobs	Marketplace liquidity	Q1 2027
First 25 documented hires	Impact KPI	Q1 2027

9. Team & Operations

Founding team covers product engineering, with planned hires in community/growth, employer success, and support operations. Platform roles (Moderator, Support Agent, Finance Manager, Marketing Manager) are modeled in-product for scalable ops.

10. Financial Summary

Year 1 focuses on product-market fit with controlled burn. Primary costs: cloud infrastructure, part-time ops, marketing, and compliance. Revenue ramps from employer subscriptions in months 6–12. See companion *Financial Model* and *Grant Budget Narrative* for detail.

Funding use (illustrative): 40% product & engineering · 25% go-to-market · 20% operations & support · 10% compliance & legal · 5% contingency

11. Risks & Mitigations

Risk	Mitigation
Low marketplace liquidity	Focused geography; employer outbound; featured job promos
Fraud / fake employers	Verification docs, moderation queue, fraud heuristics
Payment friction	Mock → staged rollout (Paystack/Stripe); local currency support
Regulatory / data privacy	Privacy policy, data minimization, audit trails
